

O - POTENTIAL NUCLEAR TARGET SITES

With the escalating situations internationally, many sites within Macomb County, the State of Michigan, and the United States have become potential targets for adversaries with nuclear weapon capability. The following pages in this section include a list of some potential target sites and also a map of sites, both covering the entire State of Michigan. It is important to know sites not only in Macomb County, but throughout the State as well. Nuclear weapons have serious after effects as well. A weapon's explosive capability may be limited to a few miles. However, the radioactive material released into the air can be carried for hundreds, if not thousand of miles. This can have serious effects on people even if they are far away. Knowing potential sites can help planners determine proper evacuation procedures and locate shelters in safe areas.

Potential Nuclear Attack Target Areas in Michigan

Source: *Nuclear Attack Planning Base 1990 (NAPB-90)*, Federal Emergency Management Agency

Federal, state and local governments, and utility personnel take extensive precautions to ensure that, should a nuclear accident occur, its impact on the safety and well being of the general public and the environment will be minimal. These precautions include development and continual testing of emergency plans, training of response personnel, coordination of response actions, and development and dissemination of emergency public information.
